## That you should know

### The contents of this document

This document is a description of all equipment, including the option. So if there is a description of the equipment that is not your car have been described. In addition, you may acknowledge by the specification of the car changes, the content does not match the car

Please.

Handling (Optional dealers) equipment was installed at Toyota dealers , Please read the instruction manual that comes with the product.

Illustration, due to differences in specifications, etc. that has been described, consistent with the equipment of your car

You may not.

### For illegal modifications

- When installed in something other than a Toyota parts for which notification was given to the Ministry of Land, Infrastructure and Transport, illegal modifications

You may be.

- Or decrease the height of the car, such as mounting the wide tires, the car is not suitable for performance and functionality

By installing the parts, or caused the failure, caused the accident, received a serious injury

- Remodeling of the handle, please do not absolutely. To handle SRS Air bag

May cause dangerous kick. Because it is being built, but is handled improperly, or not function properly, the wrong

Te bulge, serious or lasting injury, there are worst-case scenario could lead to death The Lee.

- The following cases, please consult your Toyota dealer.

- Replacement of tires and disc wheel mounting nut wheel.

If you use anything other than the specified type and different, had a negative impact on travel

Lee may be illegal to remodeling.

- Installation of electrical equipment such as radio-, removed.

Have an adverse effect on electronic devices or components, connected to the vehicle such as fire damage or accident

There is the danger that injury or death.

- Phil colored glass window of the driver's seat and passenger seat-glass front window, Please do not paste and systems (including transparency film). Interfere with the visibility stupid

Than not, it may lead to illegal modifications.

## Notes on operation

Always pay attention to, such as other cars and pedestrians, to the situation around,  
Do you drive safely

Bloom.

Driving under the influence of alcohol, please do not absolute. Attention and judgment  
is dull and drink,

Doing so can cause unexpected accident. In addition, in-drowsy drugs

Please refrain from driving and I also have.

Or use the mobile phone while driving, etc. Please do not adjust the device. The state  
of the surrounding

Attention to such 況 becomes insufficient, is very dangerous. Other than the hands-free  
car phone

Be used while driving and mobile phones is prohibited by law.

## When the children are put

Please do not leave the children in the car. Heat stroke become hot car  
Becomes dehydrated and can lead to death in the worst case.

In addition, the children will operate the unit in the car, or sandwiched between the  
glass and door, writer,

Such as flares or burns, move the device operation, the worst by the unexpected accident

There is the danger that could lead to death if.

If you put a child in your car, and precautions in order to ensure the safety of children

Installing the child seat and a summary of the "Installing a car seat"

(→ P. 94Please read).

 **Warning**

- When you launch the
  - When you stop the engine is still suffering, stepping on the brake pedal has always , Please. Prevents the car begins to move in the creep phenomenon.
  - , The rotation becomes higher idling, clean (especially when cold) immediately after starting the engine type (car starts moving) phenomenon becomes stronger. Stepped on the brakes to ensure starting, stopping Please note that at the time of operation.
- When driving
  - Mistakes to Avoid stepping on, do not understand the position of the accelerator pedal and brake pedal Please do not drive well in the state.
    - When you press the brake pedal and the accelerator pedal by mistake, the car is assumed that the sudden acceleration Lead to accidents, serious or lasting injury, your death will lead to the worst case it has.
    - Because when you retreat and twist your body posture, pedal operation is not difficult to The Lee. Please note that the operation can be reliably pedal.
    - Take the correct driving posture when moving the car a little, brake pedal and evil Please do Fumeru Serupedaru is reliably.
    - Please operate the brake pedal with your right foot. Left foot braking in emergency There is the danger, such as delayed reaction time, can lead to an unexpected accident
  - Traveling over the object or flammable, do not stop the car or in the vicinity of combustible The stomach.
 

There is a risk of fire and exhaust gas becomes very hot exhaust pipe, and is nearby combustible Lee.
  - Retreat by force of habit or to leave the shift position of the shift lever forward, R To move forward with inertia to leave please stop absolutely. Engine stops and becomes weak or braking, or the handle is heavier Then, it may cause an unexpected accident or malfunction.
  - If you notice the smell exhaust gas in the car, opened the door glass, back door is closed Please make sure that file. Cause of the accident causing the drowsiness a large amount of exhaust gas The other is dangerous, may cause serious health problems or death. Toyota quickly Please receiving inspection and maintenance in the shop.

**Warning**

- During the vehicle is moving, the shift lever P Please do not put on.  
Or damage to the transmission, you will not be able to have control of the vehicle  
There is injury or death.
- During the vehicle is to move forward, the shift lever R Please do not put on.  
Or damage to the transmission, you will not be able to have control of the vehicle  
There is injury or death.
- During the vehicle is to retreat, the shift lever D Please do not put on.  
Or damage to the transmission, you will not be able to have control of the vehicle  
There is injury or death.
- The shift lever while driving N If you, the power of the engine transmission and  
transfer  
We will be canceled, engine brake will not work.
- During normal driving, please do not stop the engine while driving. Engine while  
driving  
And operation of the brake handle is also possible to stop, eliminating the auxiliary  
power operation  
You. In that case, because it is difficult to handle and brake operation, check the  
safety  
On that, please stop at the side of the road as soon as possible.  
In addition, an emergency, such as not be able to stop the vehicle in the normal
- In the P stop downhill, please reduce the speed using the engine brake.  
Please refer to  
Excessive use of a continuous foot brake, brake overheating correctly  
Will no longer work on. (→ P. 119)
- When you stop at the hill to prevent, it leads to accidents started to move back and  
forth, Bradenton  
Please use the parking brake and Kipedaru.
- While driving Do not handle adjustment, seat, side mirrors, mirror of the inner  
Dasai.  
There is a risk of injury or death risk serious error caused the operation, an  
unexpected accident  
Is.
- Since there is a risk of serious injury or death, head and hands, other body of all  
passenger  
Please do not put the car a part of.
- Please do not off-road riding.  
When riding off-road is unavoidable, please drive carefully.
- Running water, such as river crossing, please do  
not.  
May become short of or damage to the engine and electrical equipment, vehicle and  
cause serious damage  
There is.

# For tire

Inspection of the tire are required by law. Sure as the daily inspection  
Please inspect the tire.

To extend the life of the tire to wear evenly, tire rotation  
(Replacement tire position) 5,000 km Please go to each.

## ■Item of tire inspection

Tire, please check the following items.

Inspection methods, please read "Maintenance Notes" separate volume.

### ●Tire pressure

Inspection of air pressure, please go to when the tire is cold.

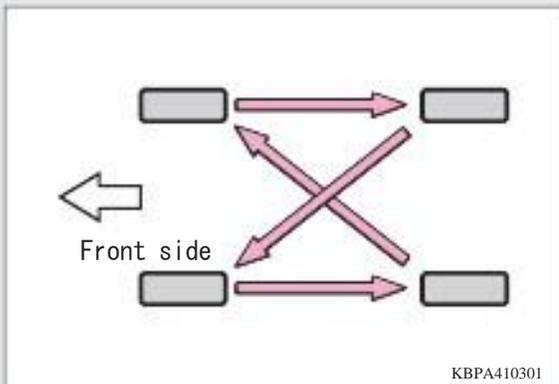

### ●The presence or absence of cracks in the tire and damage

### ●The depth of the groove of the tire

### ●Or have only one side of the tire is worn excessively (abnormal wear of the tire,

Presence or absence, etc.) differ significantly from the other tire wear extent

## ■How the tire rotation

Rote the tire in the order shown in the figure

Please to the application.

To equalize the status of tire wear,

Kotobuki

To extend the life, regular Toyota

Rotation of each tire inspection

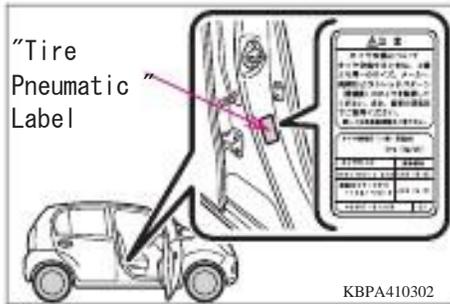

Is recommended.

Four

You Hand Input Are Of Tooth Or Was

 Knowledge

■ The number of tire pressure

Specified air pressure of the tire, the tire side of the driver's seat  
You can check the air pressure label.

Tire size		※ air pressure [kPa (kg/cm <sup>2</sup> )]	
		Front wheel	Rear wheel
155/80R13 79S		240 (2.4)	
165/70R14 81S	FF (Front-wheel drive)	250 (2.5)	230 (2.3)
	4WD (Four-wheel drive)	220 (2.2)	

Tires for emergency: 420 kPa (4.2 kg/cm<sup>2</sup>)

※ air pressure when the tire is cold

■ When you replace a tire-related parts

When you replace the tires and disc wheel mounting nut wheel, Toyota  
Please consult the dealer.

**Warning****■ Inspection, when warning of exchange**

Please observe the following: always.

If you do not observe imperative, due to damage or unstable handling characteristics of the drive-line components, that death may lead to injury or accident.

- Tires are the same manufacturer, same brand, in the same tread pattern, wear all of the difference. Please do not use the tire.

- Please do not use the tires and wheels other than the size specified by the manufacturer.

- Do not use the mix radial tires, bias tires Ted Bell, the bias tire. Please Do not.

- Do not use mixed summer tires, all-season tires, winter tires. The stomach.

**■ Ban on the use of the tire is abnormal**

When traveling or taken to handle and has been installed as the tire is abnormal, You may feel excessive vibration. In addition, the following caused the situation, an unexpected May result in an accident.

- Can not give a damage repair, such as rupture

- Vehicle to skid

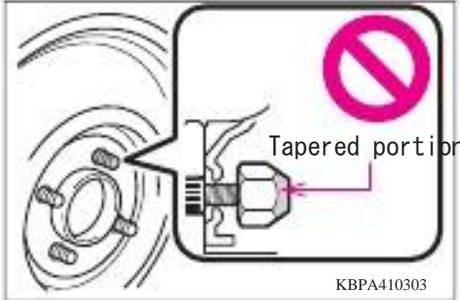

- (Fuel stability, of the vehicle, such as braking distance) of the original performance of the car is not demonstrated

Is of the eye. Heavier than the vehicle towing the car is not available.

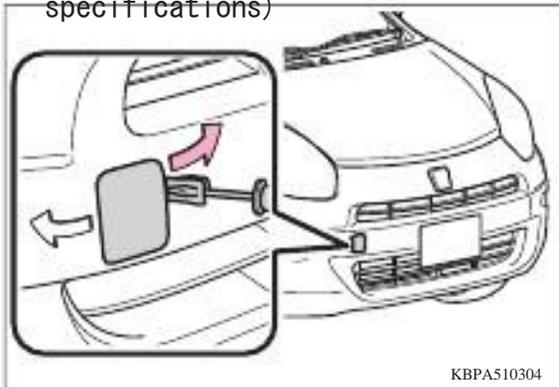

## Attaching the tow hook

Procedure: Remove the lid with a cloth and rely on flat-blade screwdriver.

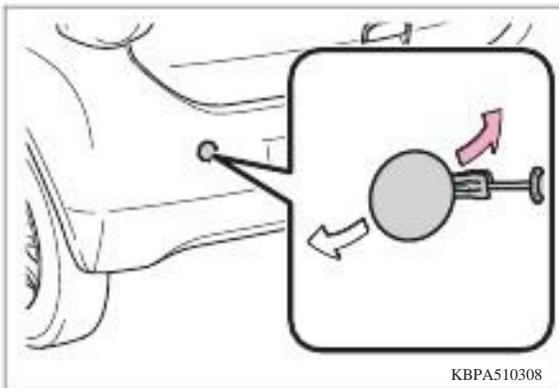

### ► Front (standard car)

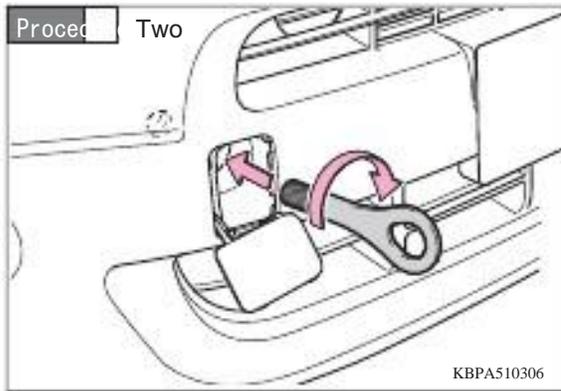

### ► Front (+ Hana Vehicle specifications)

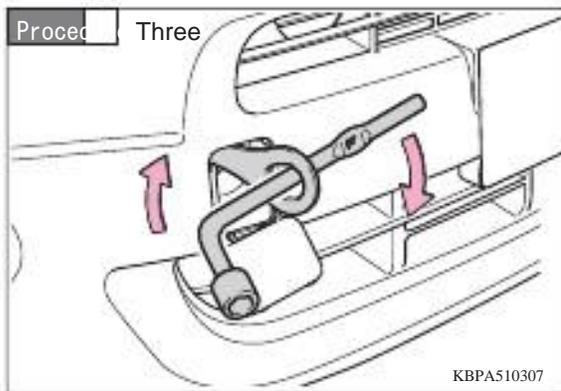

### ► Rear

Insert the hook into the hole lightly  
traction  
Tighten.

Reliably use the wheel nut wrench  
Attach to.

 Knowledge

- The stowed position of the tow hook
- II. 280

**Warning**

## ■ When installing the vehicle towing hook

Please attach firmly to the specified position.

Come off when not towing and securely attached to the specified position, the unexpected risk therefore is dangerous.

## ■ When transporting a vehicle

Surely Four Ground or wheel, Four Please be transported in state wheels also

Doing so may cause burn-in is causing the drive unit, and the car burst from the truck. Also, when the failed component seems to be the drive system is always Four Lift the wheel to transport please.

## ■ For operation in the tow

## ● When performing towing please pay close attention.

Sudden acceleration or incorrect vehicle operation overloading the hook and rope tow Please be avoided.

Tow hooks and rope may be damaged. In the unlikely event that debris Per person is dangerous such as ambient, may give a serious injury.

## ● The engine is switched "LOCK" Please do not.

Operation will not be able to handle the handle is locked, you will lead to an unexpected accident there is the danger it is.

## ● Car to be towed, please drive carefully.

Becomes weak or effectiveness of the brakes, I usually have a handle and the engine will be stopped heavily Lee.

### Caution

■ To prevent damage to the vehicle

● When you tow Please observe the following.

- Do not use wire rope
- Speed 30 km / h Below, the distance 50 km Traction within
- Traction in the forward direction
- Not apply to the Ministry of suspension rope

● Please do not tow the car is heavier than the vehicle.

May cause serious damage to parts such as drive system.

■ When you tow with a long downhill

Please tow truck to drive by car.

If you do not tow with a tow truck, there is a risk overheating brake effectiveness deteriorates  
You.

## Fuel pump shut-off system

And when the engine has stopped SRS When the airbag is  
Fuel pump shut-off system is activated, stop the fuel supply  
Then, minimizing fuel leakage.

After the system has been activated, to start the engine, follow these steps:  
, Please.

Procedure To restart the engine is switched "ACC" or "LOCK" To

Procedure To restart the engine

### Caution

- Before starting the engine

When you cancel the suspension of the fuel supply, make sure that you do not have  
enough fuel leakage  
The stomach.

## With a warning light when

If you leave lights or warning light is flashing, as follows: calm  
Please deal with later. Even if the flashing lights, then turn off is normal  
if  
No.

Insert firmly as far as it will go,  
 painting

Girls press the button switch to ensure

Please operate at.

Procedure Switch while turning the engine is brought into contact with the  
 electronic key card.

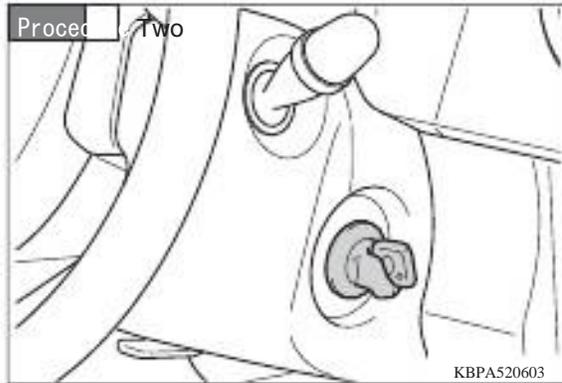

The engine is switched "ACC" If you, the security indicator (→ P. 128)

Turns off.

When not working, even after treatment, please contact the Toyota dealers.

► If you want to use the main key

Proceed **One** Shift lever is P Step on the brake pedal in the state of.

Firmly inserted as far as it will go the main key

Press into place, the engine switch. Please plug in the engine switch to ensure

Please operate at.

Proceed **Two** Press and hold to turn the engine switch.

The engine is switched "ACC" If you, the security indicator (→ P. 128) Turns off.

When not working, even after treatment, please contact the Toyota dealers.

## Knowledge

### ■ How to stop the engine

As well as how to stop normal engine, the shift lever P The engine carried out to Rotate while pressing the switch.

### ■ To change the battery

Way of starting the engine of the previous page is a temporary measure. When the battery has expired, it immediately. It is recommended to replace the battery. (→ P. 254)

### ■ When using the mechanical key, the main key is

Do the mechanical and push down firmly until the connectors to the back main key or key to ensure Boom.

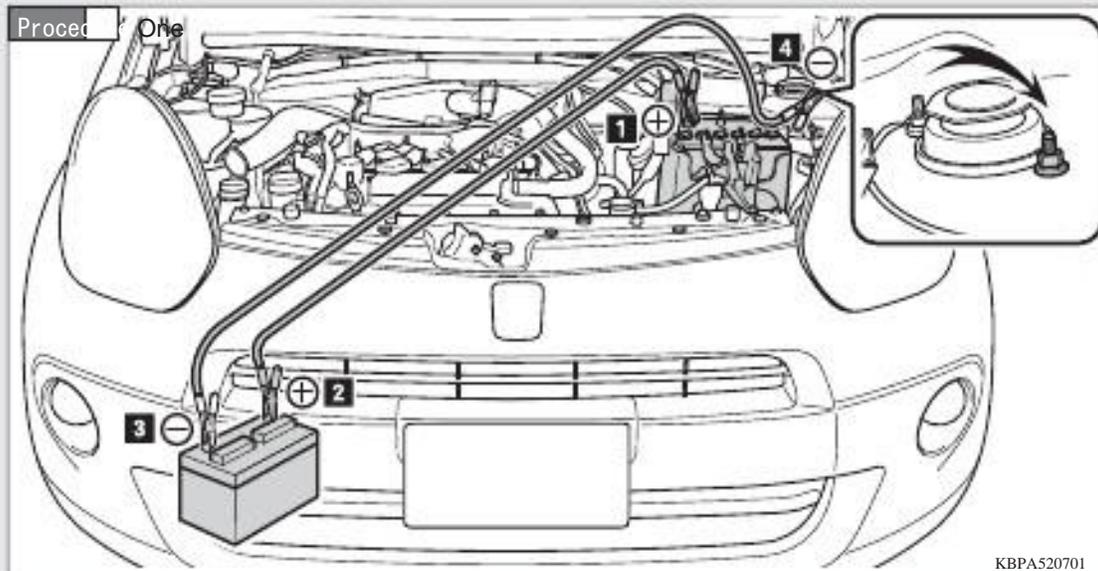

Even when the key is not plugged in securely, and spins when the engine switch There. In this case, regardless of the position of the engine switch, a key late escape There is.

If the key had been missing, "LOCK" That inserting a key at a location other than a I can not, stop in a safe place once, that it does not interfere with the traffic the car. The engine is switched "LOCK" From back to the position of, inserted into the key again Please.

## When the battery has gone flat is

If the battery has gone flat, you can start the engine with the following steps:

And a set of booster cables 12V There is a car with a battery of relief For example, the following steps, you can start the engine.

Of battery + Remove the terminal cover, the following order: the booster cable Connect with.

- 1** Connect the battery of the vehicle to the + terminal of the red booster cable
  - 2** Car batteries relief the other end of the red booster cable Connect to the + terminal fields.
  - 3** Relief of the car battery booster cables of black-Not one to terminal Tool.
  - 4** Away from the other end of the booster battery black cable Other link (the part that is fixed as shown in the figure) unpainted metal parts
- Procedure: Relief over the engine of the car, and then a little higher than the rotation about Five Minutes

Procedure: The engine switch "LOCK" Opening and closing the door of any in the state of (Vehicles equipped with key-free system)

**Procedure** While maintaining the engine speed of relief car, the engine is switched ON. Start the engine of the vehicle from then on.

**Procedure** After the start-up engine of the vehicle, connect the booster cable. Remove in reverse order when he and After you disconnect the booster cables, battery + The terminal cover Please return to the original.

Even if it takes the engine, please inspect the Toyota dealers in the early The stomach.

### Knowledge

■ For start up when the battery

This vehicle can not be started due to push-start.

■ In order to prevent the battery up

● When he is not suffering from the engine, make sure to turn off the lights and audio Bloom.

● When you are stopped a long time in traffic jams, etc., make sure to turn off the unnecessary electrical equipment Bloom.

■ When the battery has gone flat is

Information stored on your computer will be erased. Battery has gone flat Time, please inspect the Toyota dealers.

**Warning**

- In order to prevent ignition or explosion of battery

There is a risk of explosion is dangerous to ignite the flammable gas generated from the battery. So, please do not fire or sparks, such as that occur as follows.

- Booster cables are not accidentally be contacted in addition to the correct terminals or connection points
- Booster cables "+" and "-" Not to come into contact with the terminals of the
- Near the battery, does not cause a fire with matches or lighters, such as smoking or

- Handling of the battery

The battery is also in the related parts, has entered an acidic electrolyte solution that toxic and corrosive. Goods because it contains a mixture of lead or lead, concerning the handling, the following: Please observe.

- When handling the battery to wear safety glasses, (Acid) Skin, clothing, body fluid is

You do not want to adhere to the

- Not close to the battery, such as the face and head more than necessary
- In case of eye contact or body fluid is attached to the battery accidentally, immediately with plenty of water. Washing, seek medical advice immediately

In addition, your sponge or cloth to the affected area devoted to a doctor, was included in the water

- After handling related components of the battery post, the other terminal, wash your hands
- Keep away from children, to the battery

**Caution**

- Handling of the booster cable

Or connect the booster cable, when removed, the cooling fan and belts

Please use caution so as not to get involved.

## When the projector overheats

When you overheat:

**Procedure** Parked car in a safe place, stop the air conditioner.

**Procedure** Check that out steam from the engine room.

If the steam has gone out:

Stop the engine. If you no longer steam, Bonn with care

Open the net, to restart the engine.

If steam is not it:

Open the hood with care while I started the engine.

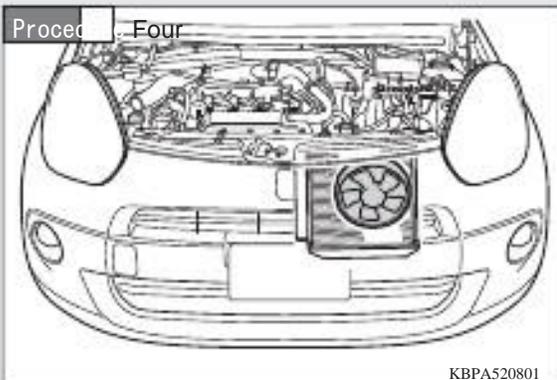

**Procedure** Check that the radiator cooling fan is operating.

If the fan is running:

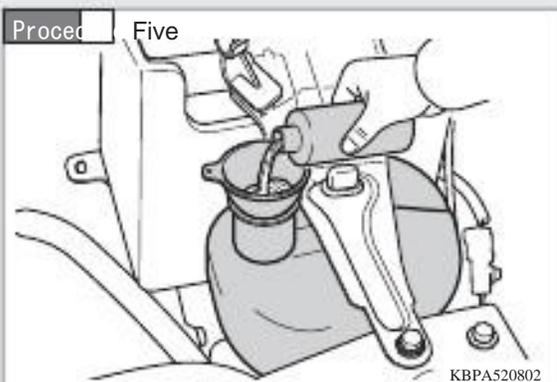

Stop the engine high water temperature warning light

goes off. If the fan is not working:

Stop the engine immediately, to contact Toyota dealers.

From the engine is cold enough,  
The amount of cooling water radiator and  
core  
Point the leak of cooling water (heat  
radiating section) section  
To Ken.

If you do not have enough cooling water,  
To replenish the cooling water.

If not, cooling water and first aid  
To replenish the water to.

, Please inspect the nearest Toyota dealer as soon as possible.

 Knowledge

■ And overheating

Here is a state of overheating.

- High water temperature warning light is lit or blinking, engine output is reduced
- Steam exits from the engine room

 Warning

■ In order to prevent accidents and injury in the engine room inspection

- If the steam has gone out from the engine room, the hood until there are no steam

Please do not open. In the engine room for is hot, I burn

Which may cause serious injury.

- When you are suffering from the engine, do the clothes away from the belt and hand fans and  
The stomach.

- Do not open hot radiator cap the radiator and engine

Please.

Fear the high-temperature steam and cooling water spouted by the pressure, resulting in serious injury such as burns

 Caution

■ Note When you put the cooling water

Please put the engine from cold enough.

Please put slowly cooling water.

Add cold water and sudden cooling when the engine is hot, late damage to the engine

There is.

## When the stack

Do not move or slip into a tire filled mud and sand, such as snow-covered road  
When the screen becomes, please try the following methods.

Procedure 1 Stop the engine. Apply the parking brake lever shift

The P To.

Procedure 2 Before and after removing the soil and

Procedure 3 snow tires. Such as wood and stone cut out the bottom of

Procedure 4 the tire. Restart the engine.

Procedure 5 The shift lever D Or R Placed to ensure that access to care while  
Go through the cell.

VSC Vehicle mounted, TRC-VSC If it is difficult to escape is working, TRC Or

VSC Please stop. (→ P. 156)

### Warning

#### ■ Warning when you escape

If you want to escape from the stack and repeat the forward and backward, the other  
Please make sure that there is nothing around to avoid the  
collision.  
When you escape from the stack, it may jump out the car forward or backward  
So, please pay particular attention.

#### ■ When you operate the shift lever is

Please be careful not to manipulate it remains pushed down on the accelerator  
pedal.  
The car is dangerous to sudden acceleration, may lead to an unexpected  
accident.

### Caution

■

●

●

# To stop the vehicle emergency

Procedure One

Procedure The shift lever N Add to.

► Shift lever is N If you went into the

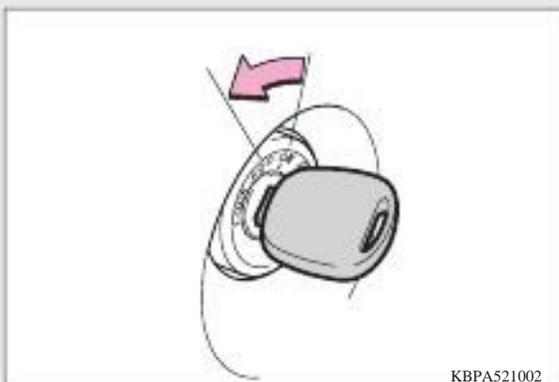

Procedure After deceleration, stop the car in a safe  
side of the road.  
Procedure To stop the engine.

► Shift lever is N If you do not enter the

Procedure Continue stepping on the brake pedal with both feet, slowing down as  
much as possible.  
Procedure The engine is switched "ACC" Then, to stop the engine.

Vehicles equipped with key-free system

Vehicles equipped with non-key-free system

Procedure Safe side of the road to park the car.

**Warning**

- When forced to stop the engine while driving

Handle for heavier braking is poor, to the control of the car

Usually pose a safety hazard. Before stopping the engine, but try to correct the slow  
down enough

## Another symptom index

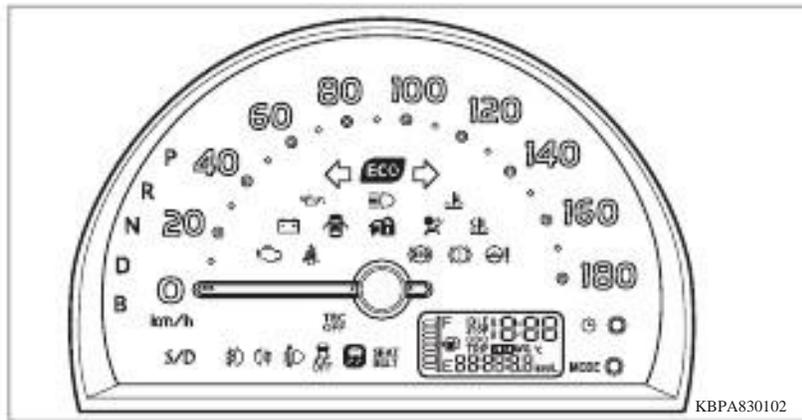

Tires were punctured	P. 280	When you punk
Engine does not apply	P. 291	Does not apply when the engine is
	P. 72	Engine immobilizer system
	P. 297	When the battery has gone flat is
Shift lever does not move	P. 293	When the shift lever can not be shifted Is
High water temperature warning light is lit	P. 300	When the projector overheats
From the engine room Rose up steam was		
I lost the key	P. 294	If you have lost the key

Battery has gone flat	P. 297	When the battery has gone flat is
Door can not be locked	P. 20 P. 27 P. 30	Door
Such as mud and sand Was stuck	P. 302	When the stack
Warning light is lit, the flashing	P. 275	With a warning light when

Non-drive vehicles equipped with sport switch

Drive vehicles equipped with sport switch

## ■List of warning light

	Brake warning light P. 275		Shift position indicator (Blinking) P. 277
	Charging warning light P. 276		Slip indicator P. 277
	Oil pressure warning light P. 276		Stop & Start Indicator system (Flashing amber) P. 277
	Engine warning light P. 277		Half door warning light P. 278
	SRS Airbag / Puriten Shona warning light P. 277		Non-driver's seat wearing seat belt Warning light for P. 278
	ABS Warning light P. 277		Fuel level warning light P. 278
	Power steering Warning light P. 277		High water temperature warning light P. 276
	Oh discharge headlights Leveling warning light port P. 277		

The alarm rang

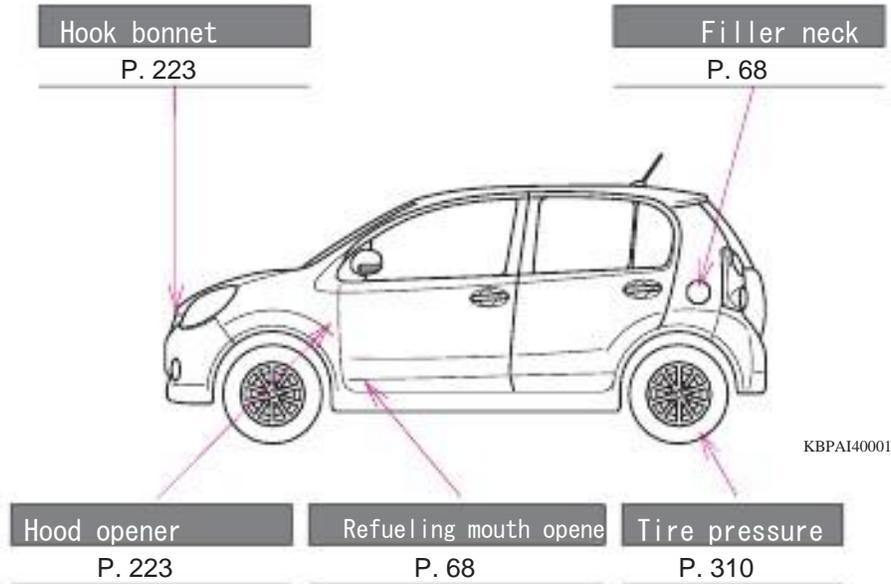

- Warning light is illuminated, flashing (→ P. 275)
  
- When no warning light is lit, flashing, please check the following.

Status of the car	Situation when it becomes	See page
In the parking / stopping	When I opened the door	P. 25
While driving	The shift lever R When set to	P. 121
	When I stepped on the brake	P. 112

## Information at a gas station

Summarizes the items needed, such as when refueling or replacement.

Capacity of the fuel (Reference value)	FF (Front-wheel drive) : 40L 4WD (Four Wheel drive) : 38L
Type of fuel	Regular unleaded gasoline <span style="float: right;">P. 69, 306</span>
The tire is cold When the air pressure	155/80R13 79S Front and rear wheels : 240 (2.4) kPa (kg/cm <sup>2</sup> ) 165/70R14 81S ● FF (Front-wheel drive) Front wheel : 250 (2.5) kPa (kg/cm <sup>2</sup> ) Rear wheel : 230 (2.3) kPa (kg/cm <sup>2</sup> ) ● 4WD (Four Wheel drive) Front and rear wheels : 220 (2.2) kPa (kg/cm <sup>2</sup> )
Engine oil capacity (Reference value)	When replacing the oil only 1KR-FE Car engine : 2.9 L 1NR-FE Car engine : 3.2 L When replacing the oil and filter 1KR-FE Car engine : 3.1 L 1NR-FE Car engine : 3.4 L
Kind of engine oil - SN 5W-30 (API SN, RC) Kind	Toyota Genuine Motor Oil / ILSAC GF-5, SAE 5W-30) - SN 0W-20 (API SN, RC / ILSAC GF-5, SAE 0W-20)
